

lavEnder™ is a cost-effective, concentrated liquid that effectively counteracts unpleasant odors in both recirculation and vacuum Lavatories. This product is designed to safely keep lavatories and holding tanks on aircraft, recreational vehicles, mobile homes, and portable facilities looking and smelling fresh.

lavEnder™ provides cleanliness and effective odor elimination without the use of phenols, formaldehyde, glutaraldehyde or heavy metals.

lavEnder™ utilizes protein catalysts to convert waste material to water soluble amino acids, eliminating odors and making holding tanks easy to keep clean.

lavEnder™ contains a non-staining dye that provides a pleasing purple-violet color that changes to green when the fluid must be changed. The dye will not damage lavatory components.

For aircraft applications **lavEnder™** conforms to Boeing specification D6-17487, Rev P and it has been approved for use by leading aircraft lavatory manufacturers.

lavEnder™ Lav Solution is a concentrated liquid that allows dilutions of 10-12 ounces of fluid per gallon of holding tank capacity. It is safe for use in all aircraft and RV holding tanks and with equipment used to service these lavatories. It is also compatible with all materials used in the construction of these facilities.

PRODUCT SPECIFICATIONS

- pH of concentrate 8.5**
- pH of 10% dilution..... 7.1**
- Specific Gravity..... 1.020**
- Freeze Point..... 25° F**

SALES AND CUSTOMER SUPPORT

The sales team from PPS has over 86 years of combined service in the Aircraft Industry and is dedicated to providing effective and economical products to ALL markets for odor control and containment. Our product quality and support is unsurpassed.
